Glenn Johnson
Distinguished Engineer and PCBA Execution Director
Lenovo

Glenn Johnson is one of Lenovo's most experienced and impactful technical leaders in the ISG supply chain, with over 40 years in the electronics industry and 17 years of international assignments. Currently serving as a Distinguished Engineer and PCBA Execution Director, he has spent the last 12 years at Lenovo driving innovation and operational excellence across global manufacturing operations. He has successfully led factories in China, Mexico, Brazil, India, and the USA. Over the last 7 years, he has saved Lenovo's ISG business millions with his notable 2018 tariff mitigation architecture. He has redefined Lenovo's Cloud manufacturing processes, opening up the ability to integrate our motherboards into our hyperscale customers. He has also pioneered server manufacturing into India and server PCBA manufacturing into Vietnam. In recent times, he has championed new technological advances into the Lenovo PCBA manufacturing processes that use AI technology for IC tamper detection and is currently leading the initiative for US Manufacturing at Lenovo US Fulfillment Center in Whitsett, NC.

Glenn's philosophy (or the 4 rules of Glenn, as he likes to call it) is: commit, take risk, make it happen, give all the credit away.
