

Environmental Compliance Conference

FEBRUARY 5, 2020 | RALEIGH, NC

Amy Ratliff, PE
City Engineer
City of Oxford

Amy is a licensed professional engineer in North Carolina and a proud civil engineering graduate of Virginia Tech. After over a decade of building a successful career in the public sector working with large municipalities such as Durham and Fayetteville, Amy branched out into the private sector and in the renewable energy fields of landfill gas to energy and solar farms for a number of years.

For the past five years as the City Engineer in Oxford, Amy has been leading the charge to build an infrastructure that will serve future generations. While water and sanitary sewer is one of her primary focuses with approximately \$43 million in current projects, she also oversees all of Oxford's engineering needs which includes streets, stormwater, the wastewater treatment plant, the City's partnership in a water plant, sidewalks and new developments. If she is not behind her desk, she is probably on a job site providing oversight on construction projects.
